

Tell me about the Digital change

Is it beneficial to me?

Contra to a lot of fears, the Switch-Off will bring numerous benefits to the end user. Most people have an Internet circuit already which they are paying for but is massively under-utilised.

By moving the Voice, onto an internet circuit that is already in place, you will remove the costs of renting the aging and expensive lines.

Quality of calls will be improved and built features available, creating a more flexible, modern and unified solution.

Calls are either included in bundles or a lot more cost-effective than the tradition call plans.

In most cases, we find that the move to VoIP creates a cost-saving along with a feature improvement that enhances working solutions / practises.

THIS IS HAPPENING – SO PLAN NOW
